Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary (RAC) associated with this disclosure form is an integral part of the form.

3. Methodology Assumptions & Principles

Main Assumptions and Principles Used to Construct the Rating Methodology used to Determine the Credit Rating as Required by Paragraph (a)(1)(ii)(C) of Rule 17g-7

The major principles and assumptions used in developing the methodology by which each credit rating listed in this disclosure form was assigned are discussed below, organized by the criteria cited in the RAC.

[Corporate Rating Criteria \(eff. 27 Jun 2025\)](#)

Principles

The major principles applied in developing and maintaining the rating methodology for non-financial corporates are:

Relative Risk: Our ratings reflect a relative vulnerability to default (for entities) and a relative measure of vulnerability to loss (for instrument ratings). As such, they do not attempt to predict a cardinal default rate for a given rating level.

Asymmetric Risk: The credit risk we address is asymmetric. Creditors face limited or no upside on stronger performance by a rated entity, with the possibility of full losses if the entity's performance weakens to the point of default.

Weakest Link: While we review the key rating factors for all rated entities, and mitigants for particular risks may be present in part or in whole from other features of the entity's profile, our methodology reflects a bias towards a 'weakest link' approach in the consideration of how key rating factors blend to inform the final rating. This bias is stronger for financial factors than for business factors, given that vulnerability to default is primarily a financial risk.

Blend of Financial and Business Risk: Notwithstanding the above, our methodology gives due consideration to the business risks that create and support the financial performance of the rated entity.

Forward-Looking: Our methodology looks at the future performance of the rated entity. Historical and current performance are used to help Fitch construct and maintain forecasts and anticipate corporate developments.

Assumptions

The major assumptions underlying the key rating factors are:

Industry risk: Our methodology assumes that, typically, industries that are in decline, highly competitive, cyclical or volatile are inherently riskier than stable industries with few competitors, high barriers to entry and predictable demand levels.

Operating Environment: Our methodology assumes that, typically, companies operating in a limited range of geographies, and/or in geographies exhibiting higher levels of economic, legal or political risk will be riskier than companies operating in a broad range of geographies, and/or in geographies with limited economic, legal or political risks.

Company Profile: Our methodology assumes that, typically, companies with weaker positions in their key markets (in terms of geography and product), a limited ability to influence price and high customer churn, with concentrated customer and/or supply bases, and higher comparative cost positions will be riskier than companies with stronger positions in their key markets (in terms of geography and product), a stronger ability to influence price or maintain lengthy client relationships, with diversified customer and supply bases, and lower comparative cost positions

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary (RAC) associated with this disclosure form is an integral part of the form.

Management Strategy/Governance: Our methodology assumes that, typically, companies which have a poor or limited track record in executing on successful strategies, which are opportunistic in their investment approach, and/or which have a bias in their funding strategy towards debt rather than equity or internally-generated funds are riskier than companies which have a strong track record in executing on successful strategies, which are measured in their investment approach, and/or which have a bias in their funding strategy towards equity or internally-generated funds rather than debt.

- Group Structure: Our methodology assumes that, typically, a company which is owned by an entity with lower creditworthiness, which is contractually or structurally subordinated from the source of cash flow generation, or which faces other limitations in its access to cash and external support (eg through covenants) is riskier than a company which is owned or formally supported by an entity with higher creditworthiness, which is contractually or structurally closer to the source of cash flow generation, or which faces easier access to external support (eg formal guarantees).

- Cash Flow and Earnings: Our methodology assumes that cash flow is a superior measure of income generation to accrual-based earnings measures. Our methodology assumes that, typically, a company which generates lower levels of sustainable cash flow, including higher levels of non-operating or other one-off cash flow, or cash flows that are susceptible to volatility through (for example) demand cyclicality, changes in input prices, changes in exchange rates, product obsolescence or development cycles or an aggressive competitive environment in other regards are riskier than companies which generate high levels of sustainable cash flow from operating sources, or cash flows that are stable under a wide range of adverse circumstances.

- Capital Structure: Our methodology assumes that, typically, a company with a higher component of debt in its capital structure and/or a higher dependence on external (eg bank or bond market) sources for current and future financing plans will be riskier for creditors than a company with a higher component of equity in its capital structure, and with a lower dependence on external (eg bank or bond market) sources for current and future financing plans.

- Financial Flexibility: Our methodology assumes that, typically, a company with low flexibility to redeploy assets and revise capital spending, high volatility in investment or input cost needs, weak access to banks and other financing sources and weak contingency plans for additional financial needs is riskier than a company with high flexibility to redeploy assets and reduce capital spending, low volatility in investment or input needs, strong access to a broad variety of financing sources and strong contingency plans for additional financial needs.

[Corporates Recovery Ratings and Instrument Ratings Criteria \(eff. 02 Aug 2024\)](#)

Principles

The major principles applied in developing and maintaining the rating methodology for recovery ratings non-financial corporates are:

Relative Risk: Our methodology reflects relative recovery given default. As such, they do not attempt to predict a cardinal default rate of recovery or loss for a given rating level.

Country Risk Overlay: Our methodology reflects the differential in treatment of defaulted obligations, depending on the location of the restructuring process, and arising from different legal codes (some of which are more favourable to creditors, some of which are more favourable to debtors) and different systemic governance quality (the enforceability of creditor claims).

Average versus Bespoke Recovery Levels: Our methodology uses a bespoke (ie mathematically derived) recovery analysis for issuers in low speculative grade ('B+' and below), where plausible scenarios of distress may be created, and where capital structures and cash flow generation may both be closer to an eventual capital structure at default, and uses average recovery assumptions by debt class above that rating level, where scenarios of distress are materially less plausible and where the capital structure and cash flow generation would both likely undergo significant changes before a default occurred.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary (RAC) associated with this disclosure form is an integral part of the form.

Emergence Values: Our methodology uses emergence (ie post-default) values that are computed using multiples of post-default cash flows for the defaulted entity.

Going Concern and Liquidation: Our methodology reflects a belief that, typically, where a going concern treatment yields a superior value to liquidation treatment, the going concern treatment will prevail, unless other factors (eg declared creditor behavior, legal judgements, political obstacles or a wide span in overlapping valuations using both treatments) indicate the contrary.

Sequential Rankings: Our methodology reflects a belief that, typically, where contractual, structural or legal features indicate a sequential ranking, those obligations will be treated according to that sequential ranking. Where obligations are deemed in our analysis to be on a pari passu basis, they will be treated as such in the analysis.

Creditor Behavior: Our methodology rates to the position where creditors will behave in a manner consistent with the sequential ranking of the obligations they hold. Our methodology does not rate to the potential conflicts that occur between and within creditor classes, or the (potentially rapid) change in creditor composition.

Ancillary Expenses: Our methodology typically includes a certain percentage of value from restructuring that will be paid out to priority creditors, including those carrying out the restructuring, lawyers, tax authorities and others.

Forward-Looking: Our methodology looks at the future performance of the rated entity. Historical and current performance are used to help Fitch construct and maintain forecasts, set ranges for recovery estimation multiples and anticipate corporate developments.

Assumptions

The major assumptions underlying the key rating factors are:

Multiples-Based Emergence Value: Our methodology assumes that, typically, a company in a distressed sector, with low franchise value and persisting structural problems will attract a lower multiple than a company in an economically attractive sector with high franchise value and limited or easily resolved structural problems.

Cash Flow Waterfall: Our methodology assumes that, typically, a creditor in a lower-ranking sequential position in the creditor mass will receive lower relative recoveries than a creditor in a higher-ranking sequential position in the creditor mass.

Jurisdictional Overlay: Our methodology assumes that, typically, creditors of defaulted obligations in jurisdictions with legal codes that are more favourable to debtors, and/or with weaker systemic governance standards and more predictable enforceability of financial claims will receive lower relative recoveries than creditors of defaulted obligations in jurisdictions with legal codes that are more favourable to creditors, and/or with stronger systemic governance standards and more predictable enforceability of financial claims.

[Parent and Subsidiary Linkage Rating Criteria \(eff. 27 Jun 2025\)](#)

The major principles applied in developing and maintaining the Parent and Subsidiary Linkage Rating Criteria for entities covered by Corporate Rating Criteria for corporates, Infrastructure and Project Finance Rating Criteria for the infrastructure and project finance sector, and Public Sector, Revenue-Supported Entities Rating Criteria for the public finance sector are:

Relative Credit Quality and Strength of Ties: Where the standalone credit profiles (SCP) of a parent and subsidiary differ, the IDRs of each will be influenced by the differential in SCP and the nature of the ties between the two companies. The closer the ties, the greater the likelihood the IDRs will be closely aligned or equalised.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary (RAC) associated with this disclosure form is an integral part of the form.

Where the parent is stronger and incentives to provide support (linkage ties) are present, the parent is more likely to provide support to the weaker subsidiary resulting in closely aligned ratings. Where the subsidiary is stronger and there are limited impediments to the parent extracting the subsidiary's assets, the parent may rely on the stronger subsidiary for support resulting in closely aligned ratings.

Assumptions

The major assumptions underlying the key rating factors are:

Categorisation of ties: Our methodology assumes that characteristics of ties between a parent and a subsidiary can vary and affect how closely linked the two entities are. Based on an assessment of these ties, rating outcomes are assigned according to a fixed notching table contained in the criteria.

We differentiate the type of linkage factors depending on whether the parent (incentives to provide support) or subsidiary (ability of the parent to access the subsidiary's assets) is stronger, reflecting the different considerations at play when providing/accessing support from the parent's perspective.

Where the parent is stronger, ties are evaluated as 'legal', 'operational' or 'strategic' incentives. Where the subsidiary is stronger, ties are evaluated as 'legal ring-fencing' and 'access and control'. Linkages can be assessed into three broad evaluation descriptions relative to the quality of those associated characteristics.

Legal ties, including legal ring-fencing: Our methodology assumes that legal ties generally carry the most weight in our analysis.

Access and control: In the Stronger Subsidiary path, our methodology assumes that effective control by the parent over the subsidiary as well as a closely integrated funding and central management policy are indicative of a cohesive, closer relationship between the parent and subsidiary.

Strategic ties: In the Stronger Parent path, our methodology assumes that a subsidiary with greater strategic value to the parent-measured from a financial contribution, competitive advantage and growth potential perspective-is more likely to receive support from the stronger parent resulting in closer ratings.

Operational ties: In the Stronger Parent path, our methodology assumes that a subsidiary with a greater degree of operational integration-measured from the perspective of operational synergies and management and brand overlap-is more likely to receive support from the stronger parent resulting in closer ratings.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary (RAC) associated with this disclosure form is an integral part of the form.

4. Rating Limitations

Potential Limitations of the Credit Rating as Required by Paragraph (a)(1)(ii)(D) of Rule 17g-7

Specific Limitations Relevant to Ratings Assigned Using the Primary Credit Rating Scale and Financial Institution Ratings

The following specific limitations relate to issuer default scales, ratings assigned to corporate finance obligations, ratings assigned to public finance obligations, ratings assigned to structured finance transactions, ratings assigned to global infrastructure and project finance transactions, ratings assigned for banks and non-bank financial institutions (Viability Ratings, Government Supporting Ratings, Shareholder Supporting Ratings, Derivative Counterparty Ratings, Ex-government Support Ratings, as well as historical Support Ratings and Support Rating Floors) and Insurer Financial strength (IFS) ratings.

- The ratings do not predict a specific percentage of default likelihood or failure likelihood over any given time period.
- The ratings do not opine on the market value of an issuer's securities or stock, or the likelihood that this value may change.
- The ratings do not opine on the liquidity of an issuer's securities or stock.
- The ratings do not opine on the possible loss severity on an obligation should an issuer (or an obligation with respect to structured finance transactions) default, except in the following cases:
 - o Ratings assigned to individual obligations of issuers in corporate finance, banks, non-bank financial institutions, insurance and covered bonds.
 - o In limited circumstances for U.S. public finance obligations where Chapter 9 of the Bankruptcy Code provides reliably superior prospects for ultimate recovery to local government obligations that benefit from a statutory lien on revenues or during the pendency of a bankruptcy proceeding under the Code if there is sufficient visibility on potential recovery prospects.
- The ratings do not opine on the suitability of an issuer as a counterparty to trade credit.
- The ratings do not opine on any quality related to an issuer's business, operational or financial profile other than the agency's opinion on its relative vulnerability to default or in the case of Viability Ratings (VRs) on its relative vulnerability to failure. For the avoidance of doubt, not all defaults will be considered a default for rating purposes. Typically, a default relates to a liability payable to an unaffiliated, outside investor.
- The ratings do not opine on any quality related to a transaction's profile other than the agency's opinion on the relative vulnerability to default of an issuer and/or of each rated tranche or security.
- The ratings do not predict a specific percentage of extraordinary support likelihood over any given period.
- In the case of Government and Shareholder Support Ratings, the ratings do not opine on any quality related to an issuer's business, operational or financial profile other than the agency's opinion on its relative likelihood of receiving external extraordinary support.
- The ratings do not opine on the suitability of any security for investment or any other purposes.

Dodd-Frank Rating Information Disclosure Form

5. Information Uncertainty

Information on the Uncertainty of the Credit Rating as Required by Paragraph (a)(1)(ii)(E) of Rule 17g-7

The rating committee noted no material limitations on reliability, accuracy, and quality of the data relied on to determine any credit rating listed in this disclosure form.

The rating committee noted no material limitations on the scope of historical data or on the accessibility to certain documents or other information that would have better informed any credit rating listed in this disclosure form.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary ([RAC](#)) associated with this disclosure form is an integral part of the form.

6. Use of Third-Party Due Diligence

Use of Third Party Due Diligence Services as Required by Paragraph (a)(1)(ii)(F) of Rule 17g-7

Fitch did not use third party due diligence services for asset-backed securities (as defined in Paragraph (d)(1) of SEC Rule 17g-10) in determining any credit rating listed in this disclosure form.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary (RAC) associated with this disclosure form is an integral part of the form.

7. Servicer/Remittance Reports Use

Use of Servicer or Remittance Reports to Conduct Surveillance of the Credit Rating as Required by Paragraph (a)(1)(ii)(G) of Rule 17g-7

Fitch uses periodic servicer or remittance data in the surveillance or monitoring of Structured Finance, Structured Credit and Covered Bond ratings.

Servicer or remittance reports are not commonly used in other rating sectors. For the applicable sectors, servicer or remittance reports are typically received monthly and occasionally quarterly. These reports are used to review asset and transaction cash-flow performance. The data are compared with initial expectations, peer performance and trends. Material variances are reviewed as to cause and significance and to determine whether a more detailed review of the rating is warranted; otherwise a rating review is performed at a minimum, annually.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary (RAC) associated with this disclosure form is an integral part of the form.

8. Data Relied Upon

Obligor, Issuer, Security, or Money Market Instrument Data Relied Upon for the Purpose of Determining the Credit Rating as Required by Paragraph (a)(1)(ii)(H) of Rule 17g-7

The information relied upon to determine credit ratings of the type listed in this disclosure form is described below, organized by the applicable criteria cited in the RAC.

Corporate Rating Criteria (eff. 27 Jun 2025)

The core information relied on in the rating process is publicly available information such as annual and interim financial statements (typically at least three years of audited accounts), transaction documents for public issues, public statements, presentations and other ad hoc disclosure made by issuer management, public regulatory filings and official industry commentary. This public information represents the minimum requirements for investors to form an investment decision and is based on the level and type of information typically presented by a publicly listed company.

Public disclosure is often supplemented by additional information provided directly by issuer management. Such additional information may take the form of more frequent or confidential updates of information typically disclosed publicly and/or specific non-public information considered analytically important. Meetings may be held with members of issuer management to discuss the information provided and to understand any assumptions used in the preparation of the information. Non-financial information used in the rating process would typically include a description of the institution's core products, client base, geographical markets, risk management framework, group structure, ownership and strategy.

Fitch works with the most recent information available. Public disclosure will generally be predictable in its timing; periodic updates of other information will typically be timed to coincide with a scheduled review, or ad hoc, in response to changing conditions. This supplemental information can provide periodic insights, but its provision is subject to the discretion of the rated entity. Historical time series information provides important insight but the most recent information typically has a greater weighting in the prospective rating opinion.

Fitch undertakes a reasonable investigation of the factual information relied on in accordance with the relevant rating methodology and criteria as far as is possible from information from independent sources, to the extent such sources are available.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary (RAC) associated with this disclosure form is an integral part of the form.

9. Information Quality

Overall Assessment of the Quality of Information Available and Considered in Relation to the Quality of Information Available in Rating Similar Obligors, Securities, or Money Market Instruments as Required by Paragraph (a)(1)(ii)(I) of Rule 17g-7

The quality of the information relied on to determine each credit rating listed in this disclosure form was consistent with the quality observed in rating similar obligors, securities, or money market instruments.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary ([RAC](#)) associated with this disclosure form is an integral part of the form.

10. Conflicts of Interest

Information Relating to Conflicts of Interest as Required by Paragraph (a)(1)(ii)(J) of Rule 17g-7

Fitch Ratings was paid to determine each credit rating listed in this disclosure form by the obligor, issuer, underwriter, depositor, or sponsor of the security or money market instrument being rated.

With respect to each credit rating listed in this disclosure form, based on the most currently available data, any person who paid for such rating did not pay Fitch for any services other than determining credit ratings during Fitch's most recently ended fiscal year.

No rating action listed in this disclosure form was the result of a look-back review conducted pursuant to section 15E(h)(4)(A) of the Securities Exchange Act (15 U.S.C. 78o-7(h)(4)(A)) and 240.17g-8(C)).

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary (RAC) associated with this disclosure form is an integral part of the form.

11. Potential Rating Volatility

Explanation or Measure of the Potential Volatility of the Credit Rating as Required by Paragraph (a)(1)(ii)(K) of Rule 17g-7

Potential Rating Volatility

RATING SENSITIVITIES

Factors that Could, Individually or Collectively, Lead to Negative Rating Action/Downgrade

- EBITDA leverage sustaining above 4.0x;
- Economic or geopolitical event that lasts for an extended period and results in a deterioration of the capital structure (e.g., increased debt, use of secured or priority guaranteed financing);
- A more aggressive financial policy that includes accelerated shipbuilding plans or increased shareholder allocations, which could make credit metrics vulnerable during a weaker economic environment;
- Cash flow from operations (CFO) minus capex to debt is less than 7.5%.

Factors that Could, Individually or Collectively, Lead to Positive Rating Action/Upgrade

- Sustainable positive FCF with application to debt payment;
- EBITDA leverage below 3.5x;
- Cash flow from operations (CFO) minus capex to debt is greater than 10%.

Best/Worst Case Rating Scenario

The complete span of best- and worst-case scenario credit ratings for all rating categories ranges from 'AAA' to 'D'. Fitch also provides information on best-case rating upgrade scenarios and worst-case rating downgrade scenarios (defined as the 99th percentile of rating transitions, measured in each direction) for international credit ratings, based on historical performance. A simple average across asset classes presents best-case upgrades of 4 notches and worst-case downgrades of 8 notches at the 99th percentile. For more details on sector-specific best- and worst-case scenario credit ratings, please see [Best-Case/Worst-Case Measures](#) under the Rating Performance page on Fitch's website

For additional information about the performance of Fitch's ratings over time, please see [Transition & Default Studies](#) under the Rating Performance page on Fitch's website.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary ([RAC](#)) associated with this disclosure form is an integral part of the form.

12. Rating Performance

Information on the Historical Performance of the Credit Rating, the Expected Probability of Default and Expected Loss in the Event of Default as Required by Paragraph (a)(1)(ii)(L) of Rule 17g-7

For the historical performance of each credit rating listed in this disclosure form, click on the link in the ratings table presented on Page 1 of this disclosure

Fitch credit ratings do not reflect a specific cardinal probability of default or loss given default.

The Rating Action Commentary ([RAC](#)) associated with this disclosure form is an integral part of the form.

13. Sensitivity to Assumptions

Sensitivity of the Credit Rating to Assumptions Made by Fitch as Required by Paragraph (a)(1)(ii)(M) of Rule 17g-7

For a discussion of the major assumptions made by Fitch in determining the announced credit ratings, along with examples that illustrate the effect of the violation of those assumptions, where determinable, please see [Sensitivity to Assumptions](#) under the Regulatory Affairs page on Fitch's website.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary ([RAC](#)) associated with this disclosure form is an integral part of the form.

14. Representations & Warranties

Representations, Warranties and Enforcement Mechanisms Available to Investors as Required by Paragraph (a)(1)(ii)(N)(1) of Rule 17g-7

The reporting of representations, warranties, and enforcement mechanisms does not apply to any of the credit ratings listed in this disclosure form.

Dodd-Frank Rating Information Disclosure Form

The Rating Action Commentary ([RAC](#)) associated with this disclosure form is an integral part of the form.

15. Attestation

Attestation as Required by Paragraph (a)(1)(iii) of Rule 17g-7

With respect to each credit rating listed in this disclosure form, David Peterson, who served as committee chair and is thus a person with responsibility for each credit rating action announced in the RAC, states that to the best of their knowledge:

- No part of the credit rating was influenced by any other business activities;
- The credit rating was based solely upon the merits of the obligor, security, or money market instrument being rated and any relevant credit enhancement; and
- The credit rating was an independent evaluation of the credit risks of the obligor, security, or money market instrument and any relevant credit enhancement.

/s/ David Peterson

Copyright © 2025 by Fitch Ratings, Inc., Fitch Ratings Ltd. and its subsidiaries. 33 Whitehall Street, NY, NY 10004. Telephone: 1-800-753-4824, (212) 908-0500. Fax: (212) 480-4435. Reproduction or retransmission in whole or in part is prohibited except by permission. All rights reserved. In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.

Fitch Ratings, Inc. is registered with the U.S. Securities and Exchange Commission as a Nationally Recognized Statistical Rating Organization (the "NRSRO"). While certain of the NRSRO's credit rating subsidiaries are listed on Item 3 of Form NRSRO and as such are authorized to issue credit ratings on behalf of the NRSRO (see <https://www.fitchratings.com/site/regulatory>), other credit rating subsidiaries are not listed on Form NRSRO (the "non-NRSROs") and therefore credit ratings issued by those subsidiaries are not issued on behalf of the NRSRO. However, non-NRSRO personnel may participate in determining credit ratings issued by or on behalf of the NRSRO.
